## Chapter 1

## Japanese Script

The Japanese writing system has a long history. It goes back to around 800 A.D. The Japanese script is in fact a writing system, as Japanese is denoted in a combination of three different scripts: *Hiragana*, *Katakana* and *Kanji*. Kanji is a conceptual script, where each character bears the meaning of one or more semantic concepts and represents morphemes. Hiragana and Katakana are both syllabic scripts, and the individual characters do not bear reference to concepts or even words, but merely to phonological units, usually two phonemes.

In this chapter, the development of the script will be reviewed in section 1.1. In section 1.2 the current Japanese writing system will be exemplified, with a focus on the Kanji in section 1.2.2. Hiragana and Katakana will be reviewed in section 1.2.1, which centers around the Kana scripts. Machine processing of the different Japanese scripts and the difficulties that go along will be demonstrated in section 1.2.5. The difficulties of learning to use the Japanese script will be illustrated in section 1.3.

#### 1.1 A Short History of the Japanese Script

The historical development of the Japanese script is tightly connected to the history of the Kanji characters. Kanji, in Japanese 漢字 (Jap. pron.  $\hbar \nu \nu \nu \nu$  / kanji; Eng. lit. Han characters) refers to the 'characters of the Han', meaning the Han Dynasty (206 B.C.-220 A.D.; simplified Chinese: 汉朝; traditional Chinese: 漢朝) (Foljanty 1984). In Mandarin the same characters are referred to as Hànzì (simplified Chinese: 汉字; trad. Chinese: 漢字). Note, that the first character 漢 (Chin. 'han', Jap. 'kan', Eng. 'Han') of both the words Han dynasty and Kanji is identical in Japanese and traditional Chinese, even though it has a different pronunciation in the Chinese and Japanese language. In traditional Chinese the character with the same meaning (汉) has a different shape. This apparent oddity will be explained in greater detail in section 1.1.1.

#### 1.1.1 Historical Development

#### 1.1.1.1 History of the Kanji

The Kanji script as developed and coined by the Han is in principle still valid today. It is used alone or in combination with phonetic spelling in China, Japan, Taiwan, Hongkong. In Vietnam it was used before it was replaced with the Vietnamese alphabet (Viet.: 'quốc ngữ', Eng. lit. 'national language', Eng. 'national script'), a script based on the Latin alphabet. In South Korea the Han characters were in use until they were replaced with Hangul (Kor. with Han characters 韓國語; Eng. 'Korean') (Foljanty 1984).

The Kanji characters were brought to Japan by Koreans living in Japan around 300-400 A.D. Since the Kanji were used by the Koreans to write Hangul they also used it to write Japanese. There was no other Japanese script before that time. Reports about an original Japanese script called *Jindai Moji* (Jap. 神代文字; Eng. 'scripts of the age of the gods') could not be proven. They are now assumed to be a political and speculative invention by Japanese Nationalists in the early 19th. century (Foljanty 1984). According to (Lange 1922) the *Kogo Shūi* (Jap. ; a historical record of the Inbe clan), which was written around 800 B.C. denies the presence of a Japanese native script before the introduction of the Han characters.

However, the questions seems irrelevant in the sence, that no longer text or document has been found, written in that script.

In the Christian year 712 an ancestral act of writing was performed at Japanese emperor Temmu's court. Hieda no Are, a member of the guild of the *kataribe* or reciters, basically a Japanese Griot, dictates the *Kojiki* (Jap. 古事記; Eng. 'Record of Ancient Matters') to Ō no Yasumaro. Ō no Yasumaro wrote the Kojiki, which is not the first written document found in Japan, however it is Japan's oldest attempt to write down spoken Japanese (Grassmuck 1997; Chamberlain 1982).

At the time the Han characters were first used to write Japanese, they were already a developed script, more than 1,000 years old, as they stabilised to their modern form within the Han period (Grassmuck 1997) <sup>1</sup>. The first chinese characters were found on oracle bones from the Shang Dynasty (Chinese 商朝), which ruled over China some 500 to 600 years within the time period between 1600 B.C. and 1046 B.C. (Grassmuck 1997; Guo et al. 2000).

According to the Kojiki, a scholar called Wani (Jap. 王仁) from Korea brought two foundational Chinese books to Japan, the Lunyu (Simplified Chin. 论语; trad. Chinese: 論語; Eng. 'Analects'), also known as The Analects of Confucius and the Qianziwen (Chin./Jap. 千字文; Jap. pron. センジブン/senjibun; Eng. 'The Thousand Character Classic'), which is a Chinese poem used as a primer for teaching Chinese characters to children. It contains exactly one thousand unique characters (Grassmuck 1997). The Chinese language comprehends more than 40,000 Hànzì characters lexicographically. Only around 25% of those including about 250 Kokuji (Jap. 国字; Eng. 'national characters') are in Japanese dictionaries. Only around 2,000-3,000 of those are part of the common characters (Foljanty 1984).

The Japanese Ministry of Education issued a list of 1,850 standard Kanji in 1946 under the name of  $T\bar{o}y\bar{o}$  kanjihy $\bar{o}$  (Jap. 当用漢字表; Eng. 'list of Kanji for general use'). The list of Tōyō Kanji was slightly revised and extended in 1981 and comprised 1,945 Kanji as the Jōyō Kanji (Jap. 常用漢字; Eng. 'often used Kanji') (Foljanty 1984). As of 2010 a revised list of 2,131 characters is in official use (Noguchi 2009).

#### 1.1.1.2 Typology of the Kanji

In order to study the Kanji and their composition, it is useful to know how they were first indendet and built. Integrated as the integral part into the Japanese writing system, despite the reform and the choice different subsets of what is considered the standard character set, the characters are still mainly composed the way as intendet by the scholars of the Han period.

From the religious writings on the oracle bones mentioned in section 1.1.1 a secular script emerged. In parallel, the process of graphical abstraction advanced and finished around 100-200 A.D., leaving aside the modern reforms of the 20th century. The invention of the paint-brush around 100 B.C. improved and simplified writing, also the writing surfaces in their order of appearance, bone, stone, metall, wood and then paper, brought further simplification and spreading of writing. Paper and paint-brush offered the possibilty to write without hindrance and technical coincidences, therefore it was possible to standartise the characters and improve them from artistic and aesthetic viewpoints.

The Kanji can be classified according to their building principle.
