Chapter 1

Handwriting Recognition Engine

The sections of this chapter are more the result of a brainstorming than a proper thought-through chapter design. xxx: see santosh2009 for mathematical stuff: nice description of what I'm doing

1.1 Capturing Data

this should deal with how the data are captured during the process mouse coordinates and stuff

1.2 Data Format

how is the data structured? radicals, strokes, characters, xml-format

1.3 Database

where did I get it from? how many chars are in there? how are they accessible? what format?

1.4 Recognition Architecture

s. 18 zeichen, punkt usw. UML diagramme.

1.5 Stroke recognition process

- 1.5.1 From point list to vectors
- 1.5.2 Handling curves
- 1.5.3 Handling all that other stuff that requires some math

1.6 Radical recognition process

1.7 Character recognition process

s. 24 pseudocode s. 9/10 pixelwolke vs. reihenfolge

1.8 Error recognition

1.8.1 How to deal with typical errors when writing Japanese

1.8.1.1 Error recognition

focus on technical aspects

1.8.1.2 Error handling

focus on technical aspects

1.9 HWR applied to e-learning of Japanese Kanji

1.9.1 Integration of HWR into e-learning app

educational aspects / the e-learning view

1.9.2 Error handling

educational aspects / the e-learning view Hallo Rainer,

Brassington Zeicheneingabe mit custom tool z.B. Silverlight.
